EXPERIENCE

12/2025 – PRESENT

SYSTEMS ENGINEER II, ROVISYS BUILDING TECHNOLOGIES

- Commission and troubleshoot BAS/EPMS controls for hyperscale data center infrastructure from field devices and industrial networks through supervisory HMI/SCADA systems.
- Develop and troubleshoot Ignition Perspective applications including tag structures/UDTs, alarms, historian/trending, expressions/transforms, and Python/Jython feedback or writeback logic.
- Diagnose Modbus TCP issues involving device loading, timeouts, gateway failures, polling limits, unit IDs, register types, scaling, floating-point interpretation, and word order; verify behavior with independent test tools.
- Integrate and validate Siemens power-monitoring/switchgear equipment, UPS systems, HVAC/BARD controllers, breakers, sensors, and status/alarm points using manufacturer register tables and project points lists.
- Maintain device/register mappings, commissioning redlines, alarm/point documentation, and HMI graphics while coordinating issue resolution across controls, electrical, mechanical, and commissioning teams.

08/2023 – 12/2025

SYSTEMS ENGINEER I, ROVISYS BUILDING TECHNOLOGIES

- Delivered BAS support at two hyperscale data centers through point-to-point verification, wiring/damper troubleshooting, Modbus/BACnet integration, device checkout, custom Niagara 4 graphics, and network troubleshooting.
- Supported L1-L5 commissioning, contractor coordination, functional testing, controls issue resolution, and turnover documentation for mission-critical infrastructure.

05/2022 – 08/2022

SYSTEMS ENGINEER INTERN, ROVISYS BUILDING TECHNOLOGIES

- Configured Schneider Electric PLCs and SCADA functionality in Unity Pro and troubleshoot HVAC instruments and actuators while supporting system upgrades and requirements.

EDUCATION

Aug 2019 – MAY 2023

BACHELOR OF SCIENCE IN MECHATRONICS, KENNESAW STATE UNIVERSITY

Final GPA: 3.83 | President's List: 5 semesters | Dean's List: 2 semesters

SKILLS

- **Controls & SCADA:** Ignition Perspective, Niagara 4 / EC-Net 4 Pro, Schneider Electric PLCs / Unity Pro, BAS, EPMS, HMI development, UDTs, alarms, historian/trending, PostgreSQL/JDBC.
- **Protocols & Integration:** Modbus TCP, BACnet, register mapping, unit IDs, holding/input registers, scaling, floating point/word order, polling and communication diagnostics.
- **Commissioning & Engineering:** L1-L5, point-to-point verification, functional testing, controls checkout, field troubleshooting, redlines, Python/Jython, C++, MATLAB, AutoCAD, Fusion 360, Arduino/AVR.

PROJECTS / ADDITIONAL

- **Voltron V3 Autonomous Racing Go-Kart:** ROS2, Python and C++ development supporting HMI/system testing, wheel odometry, localization and autonomous-system reliability.
- **Languages:** English (Native), Spanish (Fluent).
