Portfolio: <https://theruben1212.wixsite.com/rubenprojects>

EXPERIENCE

12/2025 – PRESENT

SYSTEMS ENGINEER II, ROVISYS BUILDING TECHNOLOGIES

- Commission and troubleshoot complex electromechanical systems in hyperscale data centers across sensors, actuators, field wiring, industrial networks, controllers, and supervisory software.
- Develop Ignition HMI/SCADA functionality including tags/UDTs, alarms, historian/trending, expressions/transforms, Python/Jython scripting, and PLC-facing feedback/writeback behavior.
- Diagnose hardware/software integration problems through register maps, unit IDs, polling/timeout analysis, scaling, floating-point/word-order validation, and independent device testing.
- Coordinate multidisciplinary field testing and isolate faults across hardware, networking, and software layers for reliable system turnover.

08/2023 – 12/2025

SYSTEMS ENGINEER I, ROVISYS BUILDING TECHNOLOGIES

- Performed point-to-point verification, wiring and actuator troubleshooting, Modbus/BACnet integration, device checkout, Niagara 4 HMI development, and controls-network troubleshooting at hyperscale data centers.
- Supported L1-L5 commissioning and functional testing, bringing integrated electromechanical systems from installation through reliable operation.

05/2022 – 08/2022

SYSTEMS ENGINEER INTERN, ROVISYS BUILDING TECHNOLOGIES

- Configured Schneider Electric PLCs using Unity Pro/SCADA and troubleshoot HVAC instruments and actuators, building practical industrial hardware-integration experience.

EDUCATION

Aug 2019 – MAY 2023

BACHELOR OF SCIENCE IN MECHATRONICS, KENNESAW STATE UNIVERSITY

Final GPA: 3.83 | President's List: 5 semesters | Dean's List: 2 semesters

SKILLS

- **Robotics & Software:** ROS / ROS2, C++, Python, MATLAB, wheel odometry, localization, autonomous systems, sensor/actuator integration, HMI/operator interfaces and system testing.
- **Controls & Embedded:** PLCs, Ignition, Niagara 4, Unity Pro, Arduino/AVR, Modbus TCP, BACnet, industrial communications, electrical systems and instrumentation.
- **Design & Prototyping:** Fusion 360, AutoCAD, additive manufacturing, rapid prototyping and multidisciplinary troubleshooting.

PROJECTS

- **Voltron V3 - Autonomous Racing Go-Kart:** Developed ROS2 functionality in Python and C++ and contributed to HMI development, wheel odometry, localization, system testing, and vehicle-level troubleshooting.
- **Raspberry Pi 5 Linux Systems Lab:** Built and administer a Linux server using Docker, Samba/SMB network storage, Tailscale remote networking, and Bash/Python automation; manage services, storage, permissions, and remote troubleshooting.
- **Languages:** English (Native), Spanish (Fluent).
